

# Evidence from the edges

Research update from UCL Collaborative Centre for Inclusion Health

Al Story and Andrew Hayward

Collaborative  
Centre for  
Inclusion  
Health

# Plan

- **Improving Hospital Discharge** for People who are Homeless
- **The ACE Index:** mapping childhood adversity in the UK
- **MASI - Mortality Attributable to Socioeconomic Inequality**
- **COVID-19 - Inclusion Health Response**

# CCHI Launch - 3rd of June 2019

The “Dreamboard”, a visual representation of themes, hopes and fears around Inclusion Health issues that evolved dynamically throughout day (Picture credit: Ibrar Dar)

# Inclusion Health

Collaborative  
Centre for  
Inclusion  
Health

*A social justice movement to prevent and redress health harms of extreme inequity*

Research, teaching, service design and policy must be developed “with” not just “for” those affected

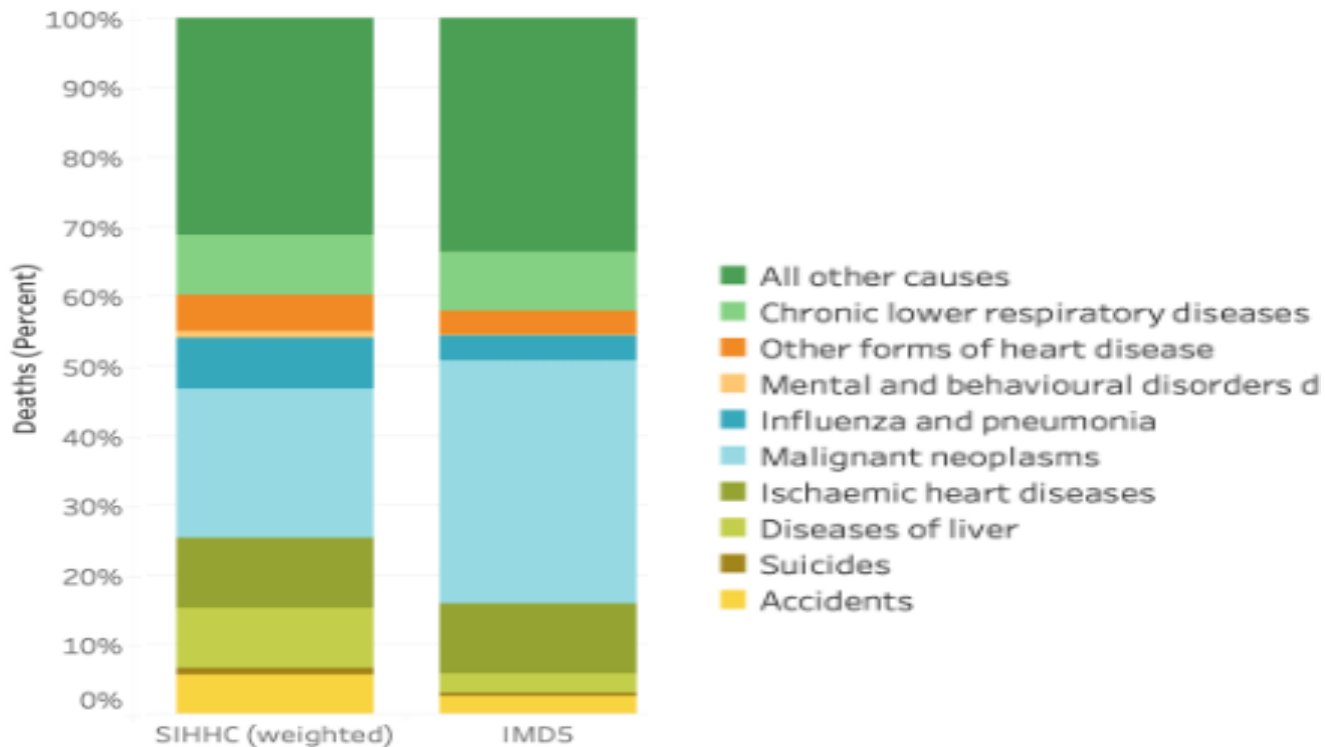

# Research and Advocacy Priorities

Collaborative  
Centre for  
Inclusion  
Health

1. Tackle the upstream causes of exclusion
2. Address public and professional ignorance, stigma and indifference
3. Make services more accessible and integrated
4. Put excluded groups at the heart of the agenda
5. Create better routes out of exclusion

# One in three people who were homeless died from a condition that our current medical knowledge and technology could have prevented

Causes of death among homeless people: a population-based cross-sectional study of linked hospitalisation and mortality data in England.  
<https://doi.org/10.12688/wellcomeopenres.15151.1>

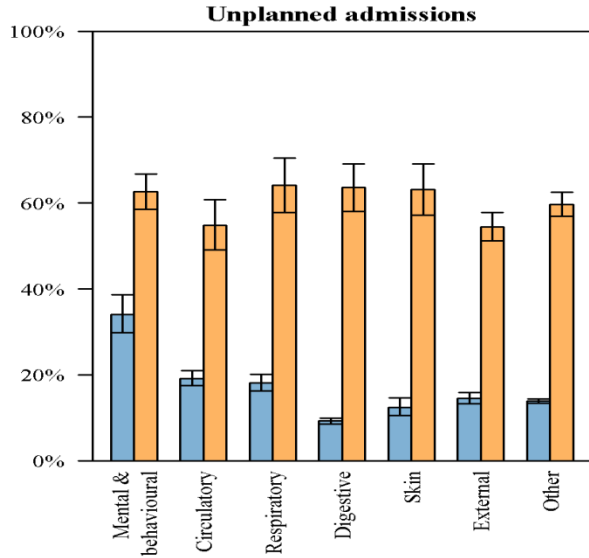

## Hospital readmissions among homeless people: a cohort study of linked hospitalisation and mortality data in England for 3222 homeless inpatients

Dan Lewer, Dee Menezes, Michelle Cornes, Ruth Blackburn, Richard Byng, Michael Clark, Spiros Denaxas, Hannah Evans, James Fuller, Nigel Hewett, Alan Kilmister, Serena Luchenski, Jill Manthorpe, Martin McKee, Joanne Neale, Alistair Story, Michela Tinelli, Martin Whiteford, Fatima B Wurie, Alexei Yavlinsky, Andrew Hayward, Robert W Aldridge

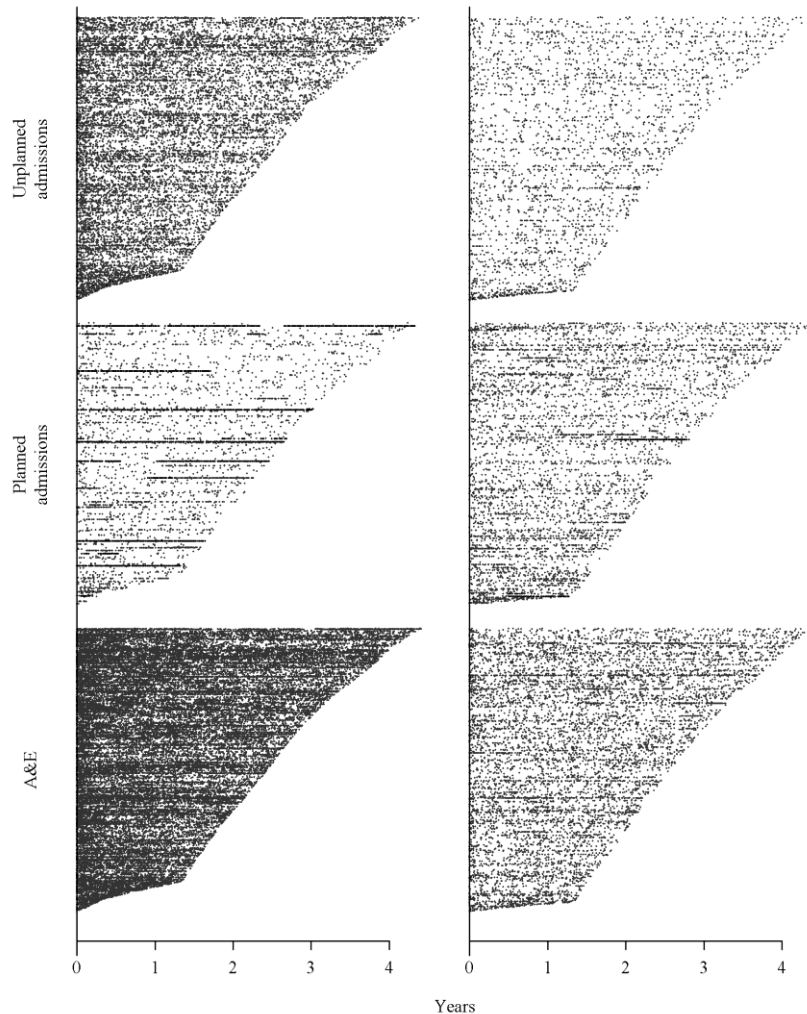

Compared to a deprived housed population, unplanned and A&E admissions were much higher, but **planned admissions were not.**

Unlike the housed population, readmissions were high in people who were homeless, **regardless of the reason** for their original admission.

Homeless

Housed (IMD5)

## 12 month event rates

**Unplanned readmission 59% vs 20%**  
Adjusted Rate Ratio 3.77 ( 3.46-4.10) p<0.001

**Planned readmission 18% vs 28%**  
Adjusted Rate Ratio 0.71 (0.63-0.81) p<0.001

**A&E visits 92% vs 57%**  
Adjusted Rate Ratio 3.76 (3.53-4.01) p<0.001

**Reduced by step down care – RR -0.82 p<0.001**

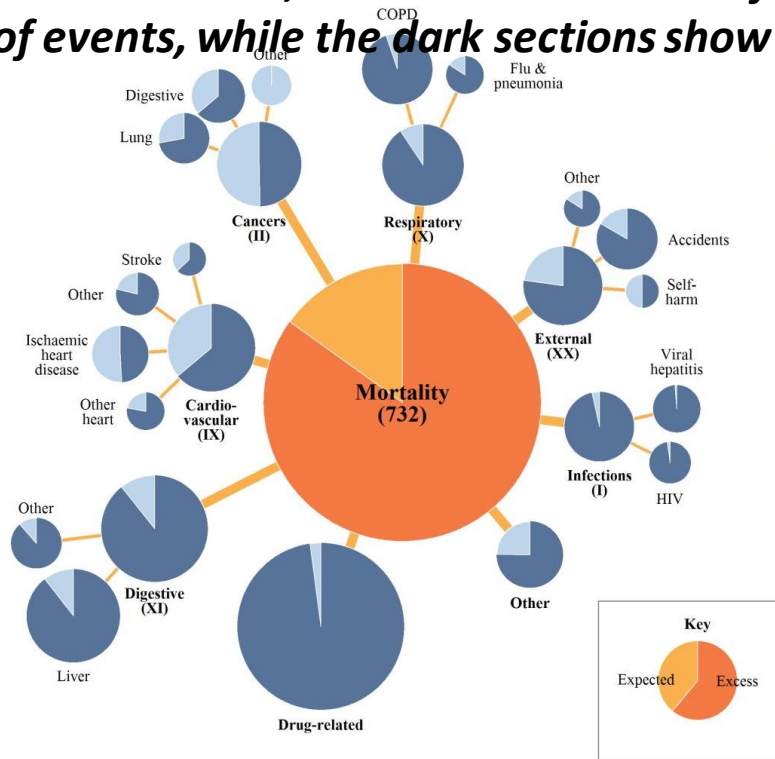

# Hospital and admissions mortality among people who use heroin and crack cocaine

Dan Lewer PhD

**Number of deaths and hospital admissions in a cohort of 6,683 people who use heroin in South London, 2006-2019. The area of the circles is proportional to the number of events, while the dark sections show the number of excess events**

SMR of 6.5 (95% CI 6.0-7.0).

SAR of 3.15 (95% CI 3.11-3.19)

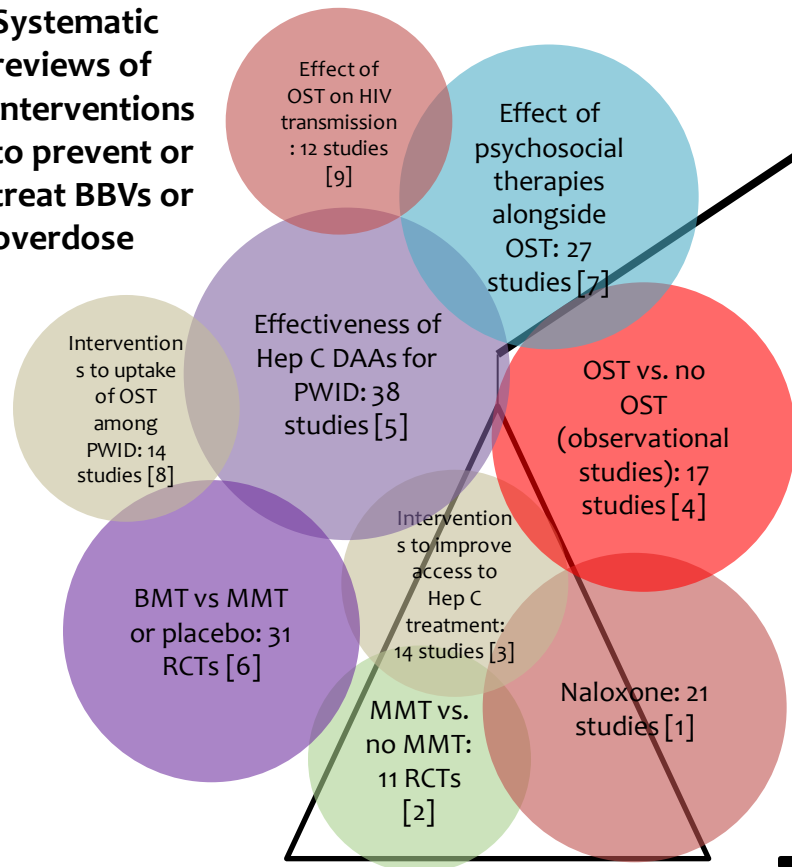

# Number of deaths in a cohort of 6,683 people who use heroin in South London, follow-up for a median of 9 years

# Evidence imbalance

**Systematic reviews of interventions to prevent or treat BBVs or overdose**

**Studies of interventions that improve physical healthcare for people who use drugs**

1. **Early Intervention** NCDs
2. **Stop** unsafe discharging of patients who are homeless
3. **Invest** in specialist integrated homeless health schemes and intermediate care facilities in the community
4. **Switch** from emergency hostels and unaffordable private lettings to adopt a full housing-first approach
5. **Tackle** the political determinants of homelessness, including child poverty

# The ACE Index: mapping childhood adversity in England

**Dan Lewer<sup>1</sup>, Emma King<sup>1</sup>, Glen Bramley<sup>2</sup>, Suzanne Fitzpatrick<sup>2</sup>, Morag C Treanor<sup>2</sup>,  
Nick Maguire<sup>3</sup>, Miriam Bullock<sup>1</sup>, Andrew Hayward<sup>1,†</sup>, Al Story<sup>1,4,†</sup>**

<sup>1</sup>UCL Collaborative Centre for Inclusion Health, Institute of Epidemiology and Health Care UCL, 1-19 Torrington Place, London, WC1E 7HB, UK

<sup>2</sup>Institute for Social Policy, Housing, Equalities Research; Heriot-Watt University, Edinburgh, EH14 4AS, UK

<sup>3</sup>Psychology, University of Southampton, University Road, Southampton SO17 1BJ, UK

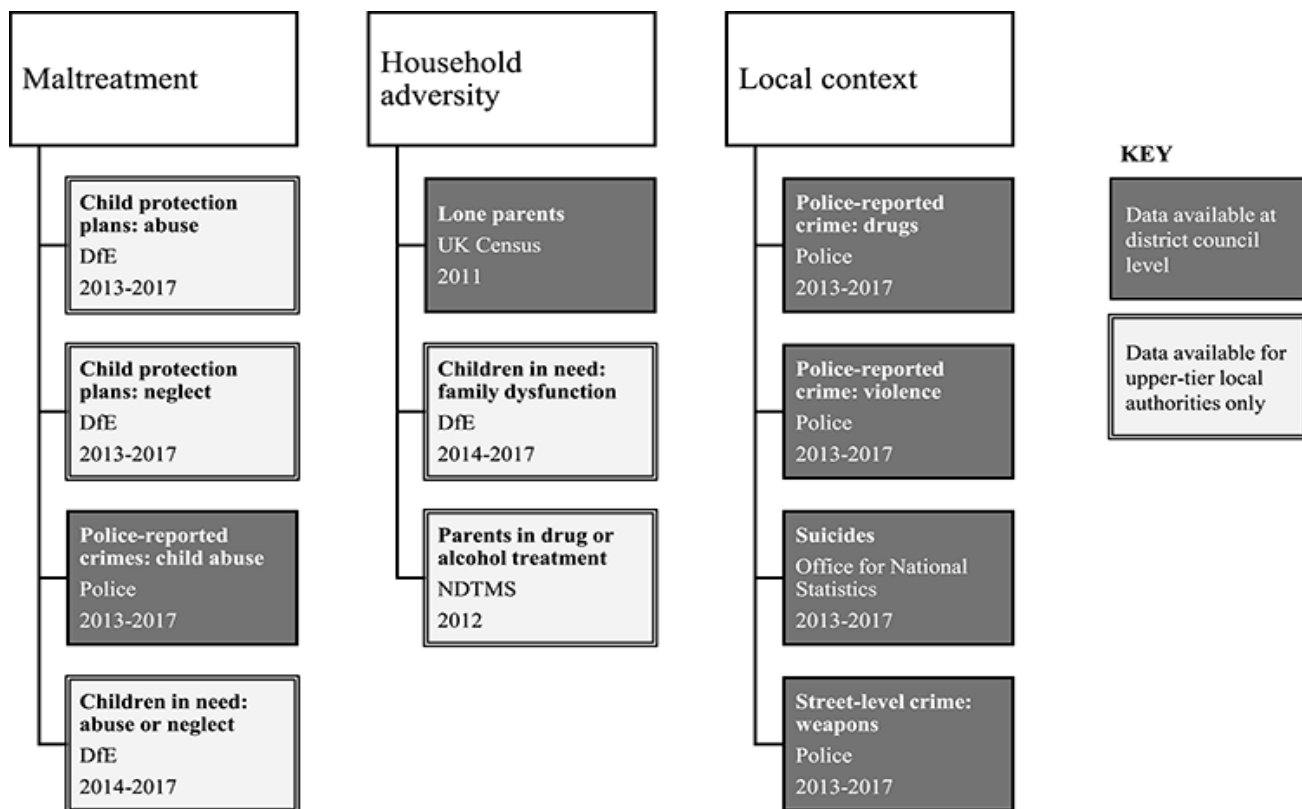

<sup>4</sup>Find&Treat, University College London Hospitals NHS Foundation Trust, London NW1 2PG, UK

# Why calculate an ACE index?

- Well-known association between ACEs and health /social outcomes later in life
- Research mostly uses cross-sectional surveys of adults
- Focus on the family / household as the cause / solution
- Possible to construct a population level indicator using available administrative data

# ACE indicators

# ACE outcomes

- Under 18 conceptions
- School exclusions
- Admissions for self harm (age 10–24)
- First remands
- SEN register (SEM)
- Primary school absences
- Secondary school absences
- Homelessness (age 16–24)
- Admissions for substance use (under 18)
- Admissions for alcohol (under 18)
- NEET
- School readiness

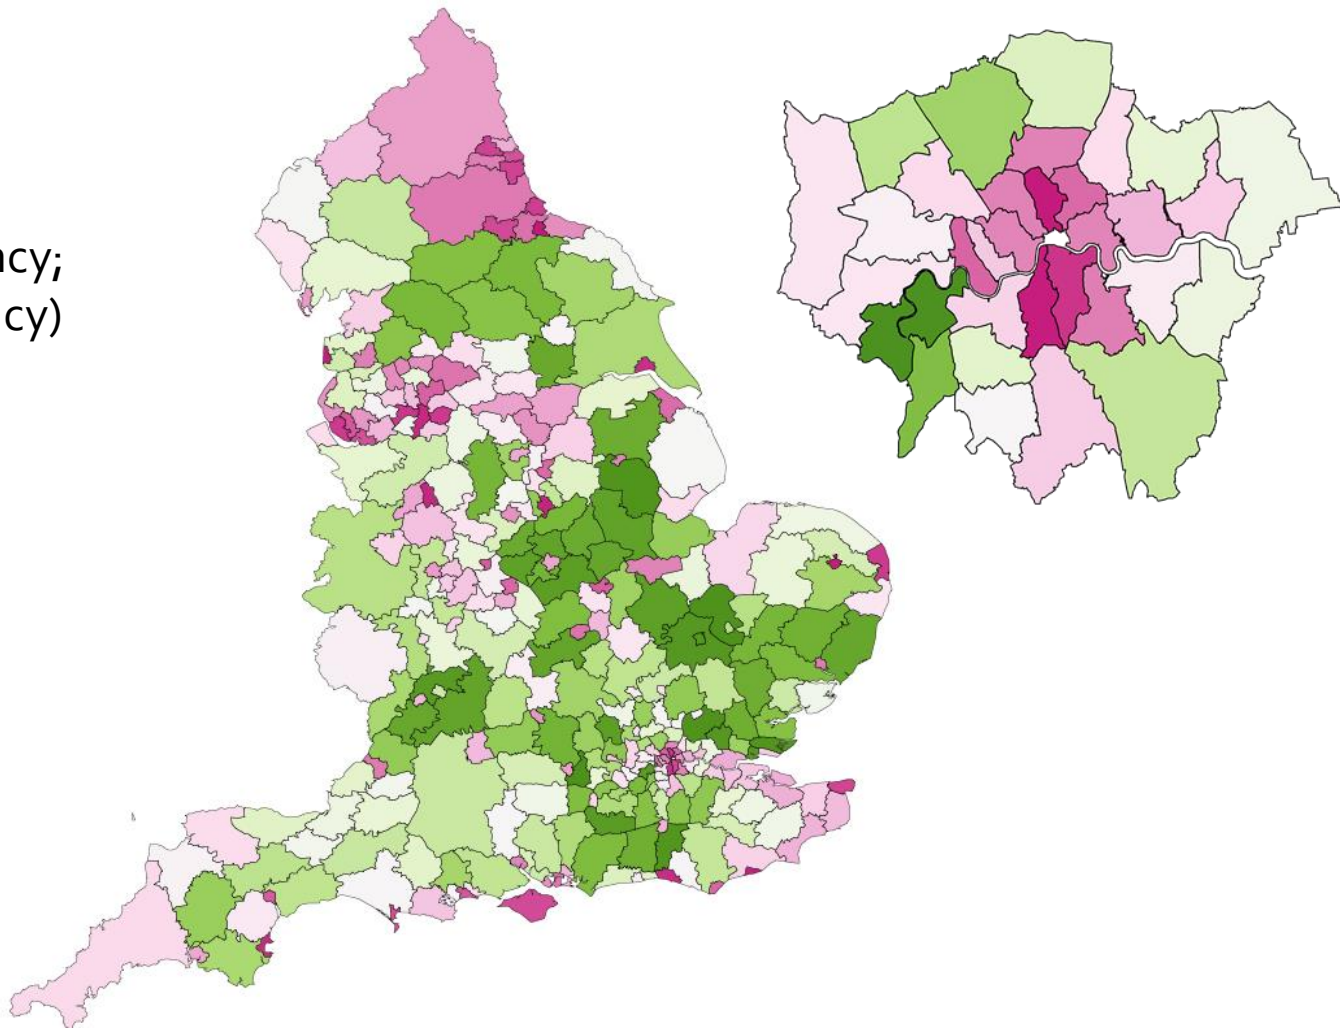

# Calculating the ACE index

- Used IMD methodology to aggregate indicators into domain scores and then aggregated domain scores into the overall index for unitary and county councils

## ACE index by local authority district

(Pink = high frequency;  
green = low frequency)

# Explore geographical variation

- Fit a linear regression model using ACE Index as the outcome to test multiple independent local variables
  - Population density, Income, Health, Employment, Crime, Education, Child poverty, Local inequality, Barriers to services...

# Frequency of ACEs is strongly associated with child poverty

Dan Lewer, Emma King, Glen Bramley, Suzanne Fitzpatrick, Morag C Treanor, Nick Maguire, Miriam Bullock, Andrew Hayward, Al Story, The ACE Index: mapping childhood adversity in England, *Journal of Public Health*,, fdz158, <https://doi.org/10.1093/pubmed/fdz158>

# What does it mean?

- The rate of ACEs in England is strongly associated with child poverty and provides evidence for a process in which deprivation increases risk of ACE

# Money matters

- A \$1 increase in the minimum wage was associated with a 10% decline in child neglect reports
- Policies that increase incomes of the working poor can substantially improve children's welfare, especially younger children

Raissian KM, Bullinger LR. Money matters: Does the minimum wage affect child maltreatment rates? *Child Youth Serv Rev* 2017;72:60–70.

doi: [10.1016/j.childyouth.2016.09.033](https://doi.org/10.1016/j.childyouth.2016.09.033)

# THE LANCET

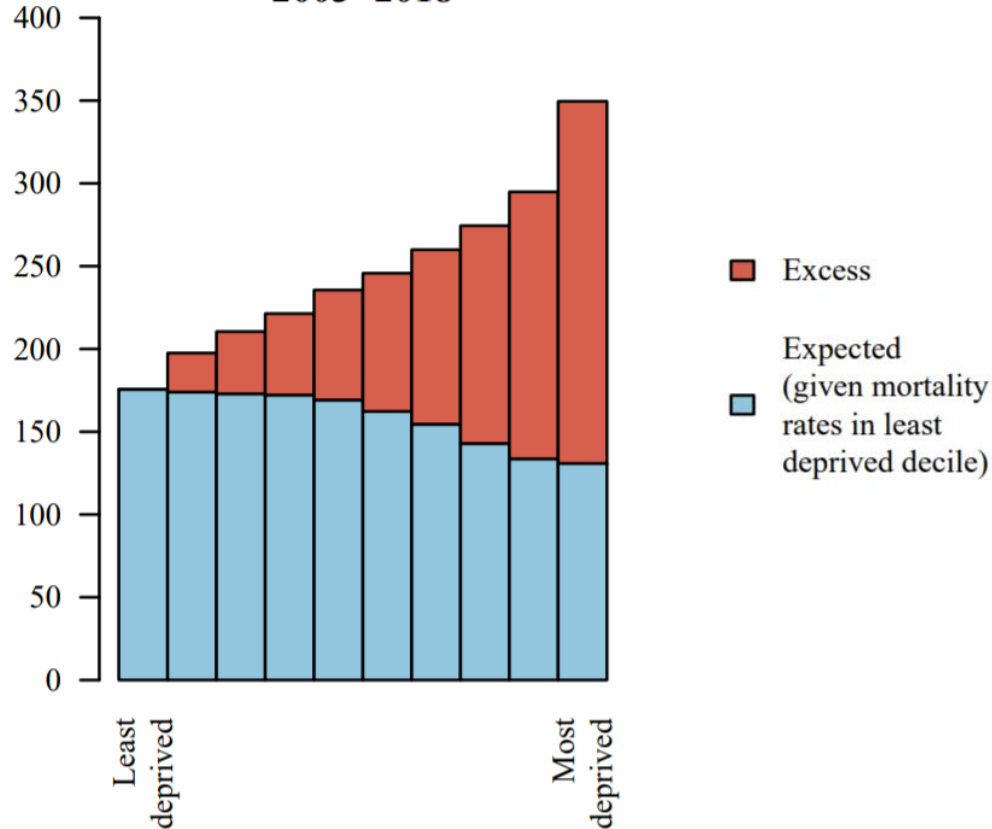

## Public Health

---

### Premature mortality attributable to socioeconomic inequality in England between 2003 and 2018: an observational study

*Dan Lewer, Wikum Jayatunga, Robert W Aldridge, Chantal Edge, Michael Marmot, Alistair Story, Andrew Hayward*

**MATI**  
**Thousands of deaths**  
**2003–2018**

35.6% of premature deaths  
attributable to inequality

One every ten minutes

### Mortality attributable to socioeconomic inequality

Premature mortality reduced - inequality persisted and increased among women in the most deprived areas

**Daily**  **Mail**

**Mail**Online

SW66Bristol, Bristol, United Kingdom,

Unfortunately, some people will always be more intelligent than others, though maybe we should help the sick and disabled more

RogerJolly, London, United Kingdom,

More loony leftie claptrap that discourages individual responsibility. They themselves refer to "public health services that help smokers quit, treat alcohol and drug dependence and tackle obesity". These are all things that individuals and families can sort out for themselves. Are they saying that poor people are too stupid to quit smoking, drinking, taking drugs, and eating chips? Encouraging people to be responsible for their own health will do more good than blaming society.

# First Public Health Revolution (1880-1920)

- Improved sanitation, public water treatment, sewage management, food inspection and municipal garbage collection
- tuberculosis, pleurisy, typhus, cholera and dysentery

# 2<sup>nd</sup> & 3<sup>rd</sup> Public Health Revolution (1920 - )

# 4<sup>th</sup> Public Health Revolution

Behaviour Change

- Communities shape opportunities to adopt and maintain healthy behaviours

Professor Dame Sally Macintyre

# COVID – 19

- How bad is it?
- Transmission?
- Control?
- What should homeless sector do?

- How bad is it?

# Key Symptoms

- Fever
- Cough
- Difficulty Breathing
- Muscle Pain
- Tiredness

# Key Figures

- 80% Mild Symptoms
- 14% have severe disease,
- 6% are critically ill
  
- Case fatality proportion - 0.3-1%

Lancet 11/03/2020

# Emerging infections Mortality

## Case fatality

A microscopic view of several coronavirus particles, showing their characteristic spherical shape and surface covered in spike proteins. The particles are rendered in shades of blue and white against a dark blue background.

- 1918 Flu -  $\geq 2\%$  20-50 million deaths
- 1957 Asian Flu - 0.1-0.2% - 33,000 deaths
- 1968 Hong Kong Flu - 0.2-0.4% - 1-4 million deaths
- 2009 Swine Flu -  $< 0.025\%$  - 18,000 deaths
- 2012 MERS – CoV -  $> 30\%$  - 861 deaths
- 2002 SARS -  $< 10\%$  774 deaths
- 2019 COVID-19 - 0.3-1% - High level of uncertainty

## 80% of the deaths are people over 60

60% of people infected are 40 - 69, although fatality rate is higher among elderly

44,672 confirmed COVID-19 cases in Mainland China as of February 11, 2020.

Source: The Epidemiological Characteristics of an Outbreak of 2019 Novel Coronavirus Diseases (COVID-19)

# Wuhan hospitalised cases CXR changes

- Consolidation – 59%
- Ground glass opacities - 71%
- Pulmonary Infiltrate - 75%

Lancet 11/03/2020

# Wuhan hospitalised cases Complications

- Sepsis - 59%
- Respiratory failure – 54%
- Heart Failure – 23%
- Secondary infection – 15%
- Sepsic shock – 20%
- Acute cardiac damage – 17%

Lancet 11/03/2020

# Wuhan hospitalised cases

## Case fatality

- No comorbidity – 18%
- Smoker – 45%
- Comorbidity – 39%
- Hypertension – 45%
- Coronary Heart Disease – 87%
- COPD – 66%
- Diabetes – 47%

Lancet 11/03/2020

# Transmission

- Direct Contact
- Indirect Contact
  - persists on hard surfaces up to 48 hrs
- Airborne Droplet – short range 1-2m
- Airborne aerosol - long range

## Basic Reproductive Rate

- COVID - 19 2.5
- 1918 pandemic 1.8
- 2009 pandemic 1.5
- Seasonal influenza 1.1 -1.5

# Key Figures

- Serial interval 4.4-7.5 days
- Incubation period - 5-6 days
- Peak viraemia - 1-2 days before illness onset.
- These figures imply some pre-symptomatic transmission
- Duration infectiousness – About 10 days

**Control**

# THE UK'S FOUR-STAGE CORONAVIRUS BATTLE PLAN

## STAGE ONE: CONTAIN

- "Detect and isolate" early cases
- Trace people who have been in contact with those infected
- Screen travellers to and from high-risk areas

## STAGE TWO: DELAY

- "Slow the spread" of virus and "push it away from the winter season"
- Encourage closure of schools and more working from home
- Launch public awareness campaign for personal hygiene
- Ban large-scale gatherings such as sporting events

## STAGE THREE: RESEARCH

- Constant monitoring and research of virus with the aim of reducing its impact
- Look for new diagnostic tests, drugs to treat patients, and preventative vaccines
- Prepare for multiple waves of the virus

## STAGE FOUR: MITIGATE

- Cancel all but essential care and support at hospitals
- Army on the street and police concentrating on serious crime
- Hospital staff leavers and retirees could be called back to duty

Epidemic with case isolation only

Epidemic with highly restrictive social distancing

Epidemic with social distancing

# Coronavirus

## Wash your hands more often for 20 seconds

Use soap and water or a hand sanitiser when you:

- Get home or into work
- Blow your nose, sneeze or cough
- Eat or handle food

For more information and the Government's  
Action Plan go to [nhs.uk/coronavirus](https://nhs.uk/coronavirus)

CORONAVIRUS  
PROTECT  
YOURSELF  
& OTHERS

- In seasonal coronavirus regular handwashing decreases risk of getting infected by one third
- Flu Watch - submitted

## Advice for stopping virus spread

**Wash hands frequently** with soap and water or use a sanitiser gel

Catch coughs and sneezes with **disposable tissues**

**Throw away used tissues**  
(then wash hands)

If you don't have a tissue **use your sleeve**

**Avoid touching your eyes, nose and mouth with unwashed hands**

**Avoid close contact with people who are unwell**

- In seasonal coronavirus washing hands regularly after coughing or sneezing reduces risk of passing on to household members by two thirds
- Flu Watch - submitted

# Self-isolation

Advice for patients with & without symptoms of infection, who are isolating themselves due to potential exposure to novel coronavirus (COVID-19). These actions will help to protect others inside & outside of your home from infection.

## Isolate yourself

Stay in your home or accommodation, do not go to work, school or other public areas

Separate yourself from others in your home or accommodation

Do not have visitors in your home or accommodation

Use separate facilities if sharing, these should be cleaned before use by others

Have food, medication & other supplies delivered to you

Try to keep away from your pets. If unavoidable, wash your hands before & after contact

## Prevent the spread of infection

Cover coughs & sneezes with a tissue

Place the tissue in a bin

Wash your hands with soap & water

Use separate household items like towels, bedding, toothbrushes, cups & dishes

Wear a mask when you are around others, if you have been told to do so

### Wash hands with soap & water:

Before cooking & eating

After using the toilet

## Take care of your health & wellbeing

### For those with symptoms of infection:

Get plenty of rest until you feel better

Drink enough fluids so that you pass urine regularly

Take paracetamol as advised, to reduce pain & fever

### For everyone in self-isolation:

Keep in contact with friends & family by phone, video & online

Carry on hobbies & interests within your home if you are able to

Take regular exercise within your home if able

- Spending more than five minutes in a room with someone with symptoms of a cold (other than a household member) – doubles your likelihood of infection.

- Flu Watch - submitted

Seek help if you develop symptoms or existing symptoms get worse (eg difficulty breathing) by calling NHS 111

Your healthcare provider will advise you on whether to remain in self-isolation following a negative test result

In an emergency, call 999 & inform the call handler about your potential exposure to COVID-19

# Social Distancing

- The following activities are more common in week before respiratory infection onset
- Bus, Tube
- Café, Restaurant, Party
- Supermarket, Small shops
- Going to place of worship

Flu Watch - Submitted

# Residential accommodation checklist

A microscopic view of several coronavirus particles, showing their characteristic spherical shape and surface covered in spike proteins. The particles are rendered in shades of blue and white against a dark background.

- Patient well enough?
- Capacity to understand instructions?
- Working phone?
- < 60 minutes from hospital?
- Can exposure of other residents be minimised sufficiently?
- Can the patient be accommodated elsewhere?
- Can their housemates be accommodated elsewhere?
- If more than one patient can they be cohorted?
- Are any housemates particularly vulnerable e.g. chronic illness?
- Can advice be issued to reduce transmission?

# Residential accommodation checklist

- Single occupancy room?
- Handwashing facilities – soap, water, paper towels?
- Can the patient have their own toilet or can shared facilities be adequately cleaned between use?
- Sufficient cutlery and crockery to not need to share?
- Sufficient face masks, paper towels, waste disposal bags, cleaning products?
- Area to temporarily and securely store waste or laundry?
- Support for getting groceries, prescriptions & other “personal needs”

Despite intensive control  
16% attack rate  
3.5% Case Fatality

# Kirkland Lifecare Centre Washington

- 20<sup>th</sup> Feb – 10<sup>th</sup> March
- 120 residents
- 56 COVID-19 confirmed
- 26 deaths
- 19 confirmed as COVID 19

# Prevalence of long-term conditions, housed and homeless people ('Find&Treat'), England

# COVID-19

## Homeless strategy

- Current guidance based on premise that people with symptoms will seek help
- And be able to self-isolate!

Guidance

# Guidance for social or community care and residential settings on COVID-19

Published 25 February 2020

- Promoting hand hygiene and respiratory hygiene
- Increase availability and prominence of hand hygiene products
- Regular disinfection of frequently touched surfaces
- Face masks only recommended for cases/suspected cases
- Waste disposal
- Cleaning facilities after a case

# COVID-19

## Homeless strategy

- Prevent inverse care
- Reduce / delay transmission risk
- Prevent explosive outbreaks in residential services and congregate setting - day centres
- Prevent high mortality

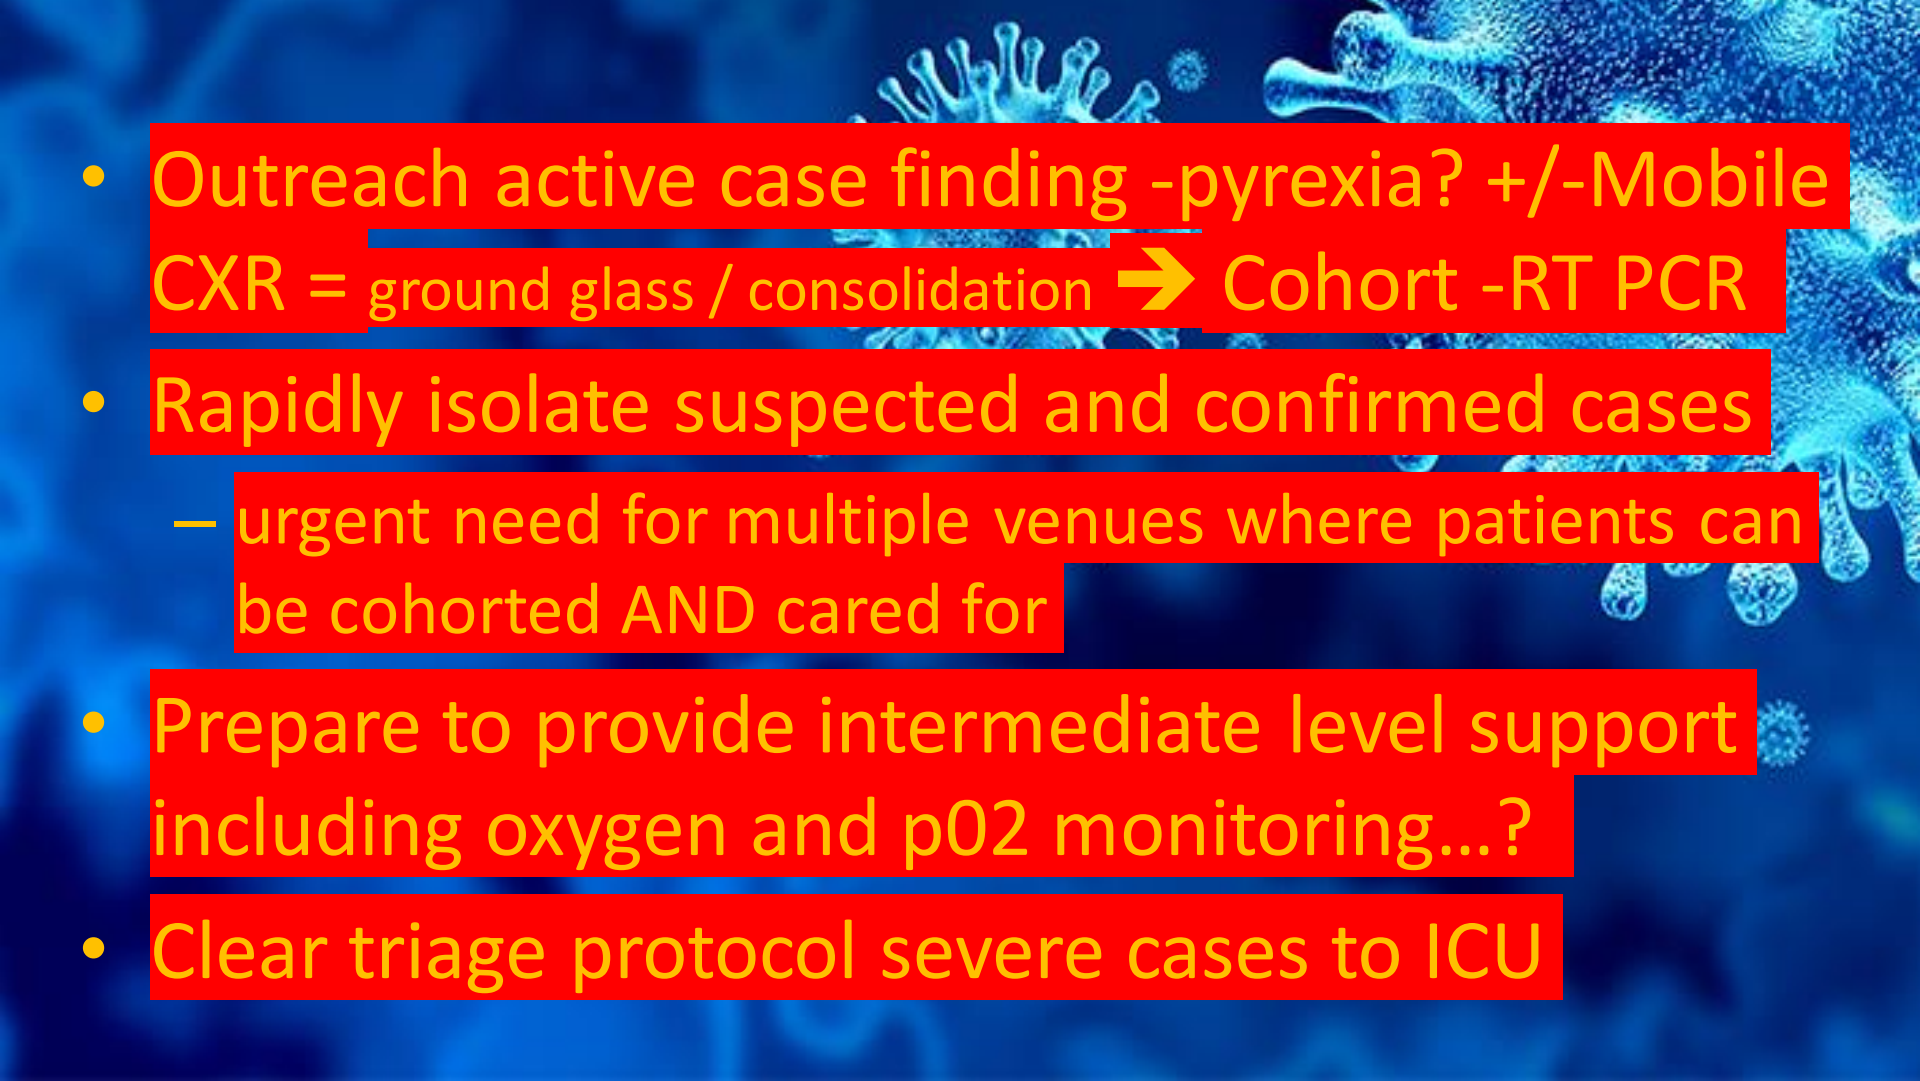

# COVID-19

## Homeless strategy

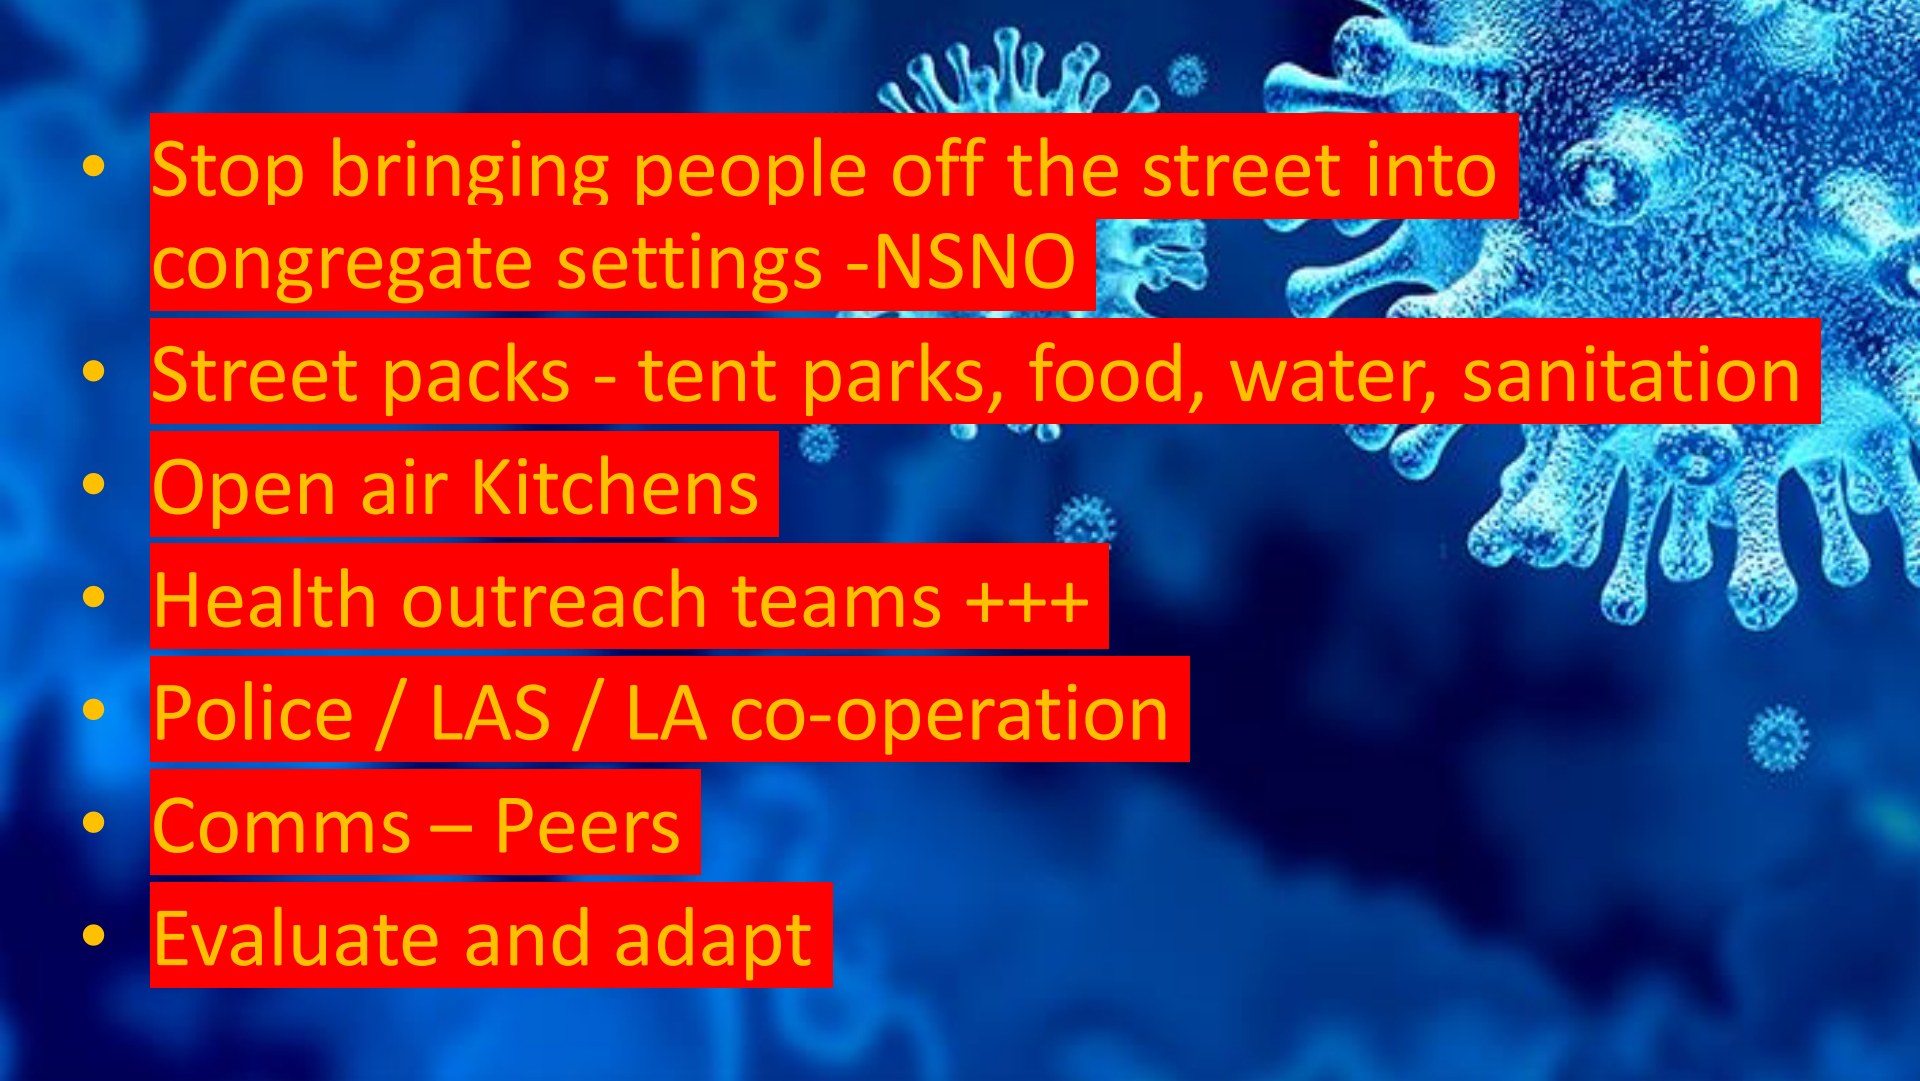

- Hand Hygiene
- Respiratory Hygiene
- Hand washing materials prominently available
- Increased surface cleaning

- 
- A microscopic view of coronavirus particles, showing their characteristic spherical shape with a textured surface and prominent spike proteins extending from the outer edge. The particles are rendered in shades of blue and white against a dark blue background.
- The right messages – Comms – Stigma – Blame
  - Training and awareness – PPE
  - Co-design - Peers

- 
- Outreach active case finding -pyrexia? +/-Mobile CXR = ground glass / consolidation → Cohort -RT PCR
  - Rapidly isolate suspected and confirmed cases
    - urgent need for multiple venues where patients can be cohorted AND cared for
  - Prepare to provide intermediate level support including oxygen and pO2 monitoring...?
  - Clear triage protocol severe cases to ICU

- 
- Stop bringing people off the street into congregate settings -NSNO
  - Street packs - tent parks, food, water, sanitation
  - Open air Kitchens
  - Health outreach teams +++
  - Police / LAS / LA co-operation
  - Comms – Peers
  - Evaluate and adapt

- Solidarity
